DETAILED ACTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-31, drawn to an apparatus and method comprising a lighting fixture to generate variable color radiation, classified in class 315, subclass 291.
- II. Claims 32-40, drawn to a light fixture with heat dissipation, classified in class 362, subclass 126.

The inventions are distinct, each from the other because:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination refers to a control system generating variable color radiation while the subcombination refers to a lighting fixture structure for preventing a light source from contacting with a liquid. The subcombination has separate utility such as a troffer housing.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
